Assignment - 8 Web Server

1 Aim:

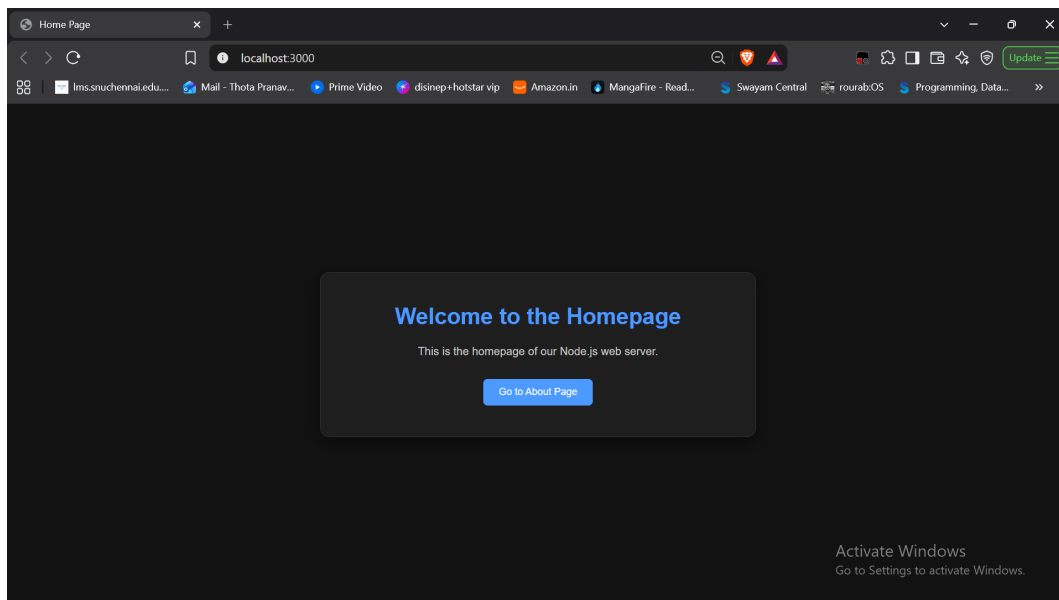

To create a Node JS server that has 2 pages - Homepage, and About and to implement proper error handling for invalid routes (e.g., return a 404 status code for unknown routes), and also, Implement a middleware to log incoming requests to the console.

2 Code Implementation:

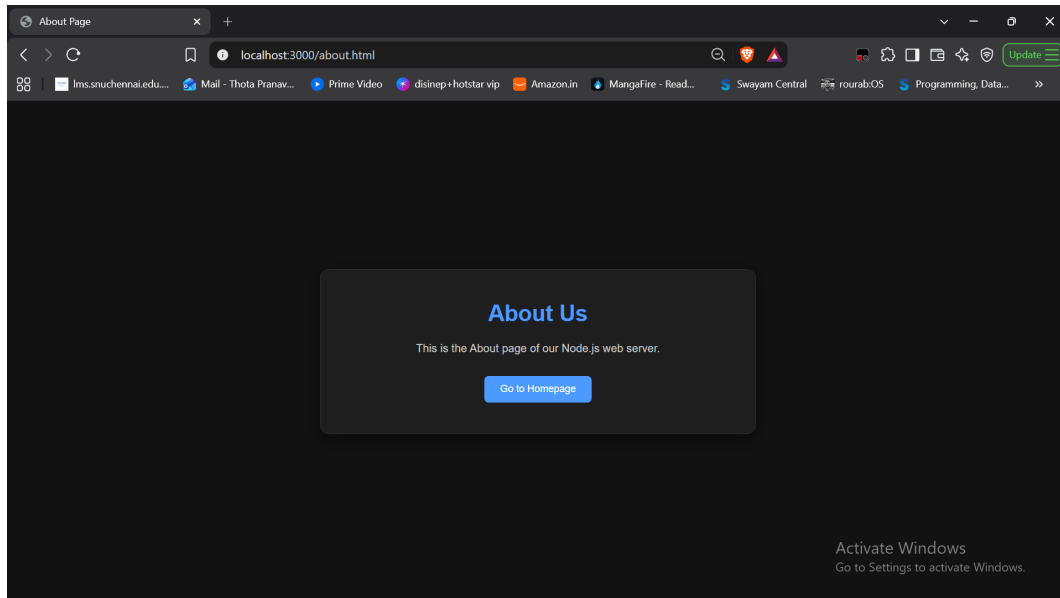

Github Link: <https://github.com/PranavVarshin/Web-Technologies-Lab/tree/main/Lab%208>

3 Web Server:

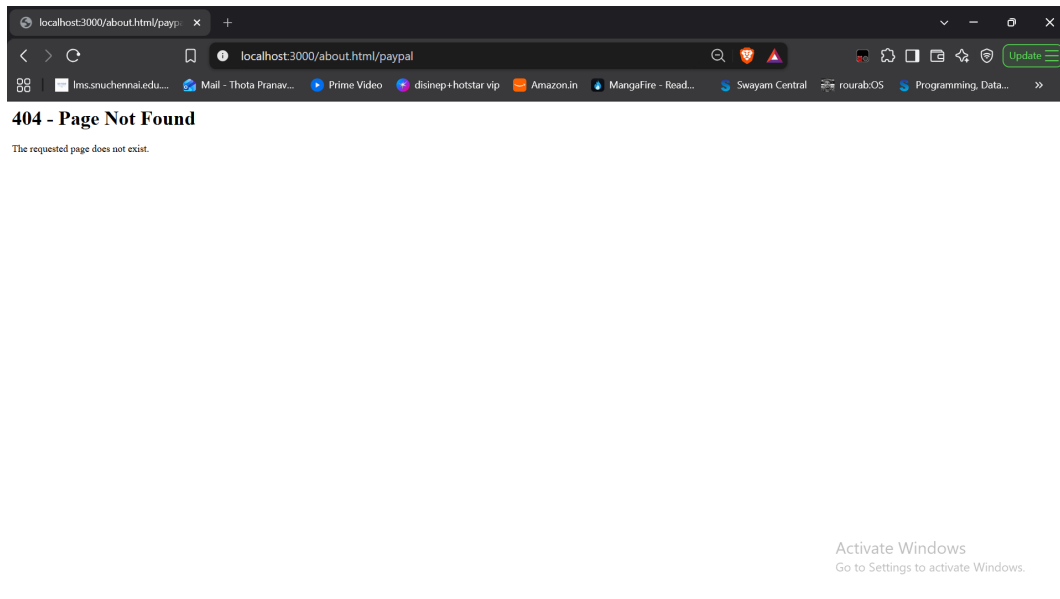

3.1 Home Page:

3.2 About Page:

3.3 Error Page:

3.4 Terminal Updation:

```
C:\Users\lenova\Downloads\SEM 5\Web Technologies\Lab\Lab 8\Web-server>node Server.js
Server is running at http://localhost:3000
GET /
GET /style.css
GET /about.html
GET /style.css
GET /about.html/paypal
^C
C:\Users\lenova\Downloads\SEM 5\Web Technologies\Lab\Lab 8\Web-server>
```

4 Conclusion:

The Node.js web server was successfully implemented with Home and About pages. The server uses the http, fs, and path modules to handle requests and serve files asynchronously. A request-logging middleware was implemented to display incoming requests in the console, and proper 404 error handling was provided for invalid routes or missing files. The server successfully demonstrates basic routing, static file serving, middleware implementation, and error handling in Node.js.
